1. PRODUCT DESCRIPTION

Silfoam is a sterile, absorbent, self-adherent soft silicone wound dressing. It comprises of a soft silicone skin and wound contact layer, a polyurethane foam layer with low to moderate absorption capacity and a vapour permeable, water and bacteria resistant polyurethane film outer layer. It is available in a border and non-border version. In the presence of exudate, Silfoam helps maintain a moist wound environment conducive to natural healing conditions.

Product Composition:

Polyurethane, copolyamide, polyacrylate, silicone, polyethylene

2. INTENDED PURPOSE

Long term, non-invasive wound dressings intended principally for the management of low to moderately exuding, partial to full thickness wounds which have breached the dermis on injured skin and can only heal by secondary intent.

2.1 INTENDED POPULATION

Individuals of all ages who are at risk of developing the following wounds;

- pressure ulcers
- venous and arterial leg ulcers
- diabetic foot ulcers
- first and second-degree burns

2.2 INTENDED USER

Intended for use by health professionals; may be used in a hospital, community and home setting.

3. INDICATIONS

Silfoam is indicated for the management of low to moderately exuding, partial to full thickness wounds; specifically, the following wounds;

- pressure ulcers
- venous and arterial leg ulcers
- diabetic foot ulcers
- first and second-degree burns

Silfoam may also be used as an aid for the prevention of skin breakdown.

4. CONTRAINDICATIONS/ SAFETY INFORMATION

Silfoam is contraindicated for

- ulcers resulting from infections, such as tuberculosis, syphilis, deep fungal infections
- bites or third-degree burns

In case of infection with inflammatory signs (temperature, oedema, redness, pain) contact proper medical authority. Resume use of Silfoam when normal healing conditions are present again.

- Skin reactions may occur in very rare cases
- The dressing is indicated for low to moderately exudating wounds so should not be used on highly exudative wounds
- The dressing should not be used on dry wounds.

5. WARNINGS 4

- Do not use if pouch is damaged or opened
- Do not re-use. Re-use of single-use devices creates a potential risk to the patient or user. It may lead to contamination and/or impairment of functional capability. Contamination and/or limited functionality of the device may lead to injury, illness or death of the patient.
 - Because of its good adhesive properties Remove with caution if skin is fragile (e.g. parchment skin).
- Do not use the product simultaneously with oxidizing solutions, e.g. hydrogen peroxide or hypochlorite solution'.
- The wound may initially appear to increase in size in the early stages of SilFoam treatment. This is normal and occurs as any wound debris is removed from the edges of the wound. This clears the way for healing'.
- The frequency with which the dressing is changed should be adapted to reflect the wound's healing progress, depending on the amount of exudate
- 'If skin condition worsens or does not improve within 2-3 to weeks of use then the diagnosis and therapy should be reassessed
- Particularly in cases of an advanced degree of epithelialization over the wound and drying exudate, it may prove prudent to change to other modern wound treatment products.
- Dressings should only be used as part of a comprehensive PU prevention programme

6. INFORMATION FOR USE

The Silfoam dressing is very simple to apply, requiring no special skills or equipment. The interval between dressing changes will depend entirely upon the state of the wound. On moderately exuding wounds, daily changes may be required at the beginning of treatment but this may be reduced to every 2 to 3 days for low exuding or epithelialising wounds.

6.1 Preparation

- a) Visually inspect pouch for damage prior to opening.
- b) Cleanse the wound with sterile saline or Ringer solution and sterile swabs.

A	Title	Instructions for Use SilFoam Range	
AVERY DENNISON	Revision	С	
	Technical documentati	on Number	LFD-PKG-000263

c) Dry the skin surrounding the wound.

6.2 Dressing Application

- a) Follow local protocols on the handling of sterile product.
- b) Select the appropriate Silfoam size that will completely cover the wound surface, ensuring a 2 to 3 cm margin beyond the edges of the wound. If necessary, several dressings can be overlapped to cover very large wound areas.
- c) Grasp the tabs with both hands. Position the dressing over the wound site with the tab sides facing downward. Slowly peel away the tab from one side of the dressing.
- d) Apply with a rolling motion to the wound site.
- e) Remove the second tab. To secure, gently apply pressure to the dressing as it attaches to the wound.
- f) When dressing a sacral ulcer, slightly flex dressing and place into the gluteal fold.
 - Smooth outward to ensure adhesion. Examine the dressing on a daily basis for leakage or other problems. If no problems arise, the dressing may be left in place for up to 7 days before another dressing is required.
- g) In case of venous & arterial leg ulcers, compression therapy may be used in conjunction with Silfoam treatment, when so directed by a physician.

6.3 Dressing Changes

Silfoam should be changed when the dressing is saturated with exudate (2 to 3 days on average). Dressing may be left in place up to 7 days when there is little exudate or changed every 24 hours when the amount of exudate is significant. Where leakage occurs the dressing should be changed immediately.

- a) Gently remove Silfoam.
- b) Follow procedure 6.1 to 6.2 to apply a new dressing.

7. CLINICAL BENEFIT

- Minimises trauma at dressing change
- Easy application and removal
- · Secure adhesion
- Exudate passes through the silicone adhesive quickly into the foam, due to excellent wicking properties
- Significant absorption capacity resulting in reduced risk of maceration at the wound edges
- Can be left in place for up to one week allowing for longer undisturbed wound healing
- Absorption Capacity /Excellent Absorption / light to moderate fluid handling capacity
- Self-adherent / Edge-to-edge adhesive

Title	Instructions for Use SilFoam Range	
Revision	С	
Technical documentati	on Number	LFD-PKG-000263

- Maintains moist wound environment
- Optimal moisture vapor transmission rate
- Conforms to the natural contour of the body making it comfortable to wear
- Reduced pain on removal

8. STORAGE

Store dressings away from direct sunlight at ambient temperature and humidity.

9. **DISPOSAL**

To minimize the risk of potential infection hazards or environmental pollution, Silfoam should be disposed of following disposal procedures according to applicable local laws, regulations and infection prevention standards.
